

HWeb Mobile Ticketing

Employees and drivers can enter reservations and print tickets in the field, or from their vehicles, via HWeb Mobile Ticketing. Increasing your company sales and levels of client service is accomplished through a portable ticket printing and point of sale cashiering device. Whether you elect to provide a mobile ticketing terminal to a curbside greeter, or choose to install a mobile terminal in fleet vehicles, your staff will have the ability to not only issue tickets and receipts to all passengers but will be able to handle walk up passengers: enter reservations, collect payment, authorize credit cards, issue tickets, boarding passes and receipts all from the convenience of a powerful and portable handheld device.!

HWeb Mobile Ticketing Provides:

- ***Employee Login/Logout***
- ***Fare & Service Calculation***
- ***Credit Card Capture & Approval***
- ***Ticket & Receipt Printing***
- ***1 & 2 Way Messaging***
- ***Web Reservation Lookup***
- ***Complete Transaction Ledger***
- ***Cashiering & Shift Summary Reports***
- ***Real Time Data Upload***

The Hudson Group has partnered with ExaDigm, “the leader in designing and developing innovative wireless and wired solutions for today’s cashless society,” to produce an ergonomic, hand-held wireless point of sale terminal that allows for reservation entry, acceptance and authorization of credit and debit cards, and the printing of tickets, receipts and transaction reports. The cellular capability of the portable unit further permits real time data uploads to the office as well as one or two-way text messaging.

HWeb Mobile Ticketing

Step 1 ~ Configure: Download your standard Hudson Fare and configuration files into the portable unit from an office workstation.

Step 2 ~ Login: Turn the device on and login with an employee or driver ID (and vehicle mileage if desired). A shift record is created.

Step 3 ~ Enter Reservation: Follow a simple menu to create a new reservation; selecting the appropriate service type, drop off location and the number of passengers. The total fare is calculated and the preferred payment method is chosen. If the client had placed an online reservation, the reservation is easily recalled via the reservation number.

Step 4 ~ Collect Payment: If cash is collected, a receipt and ticket are printed. If payment type is credit card, the card is slid through the integrated swiping device. The card data is encrypted and is then authorized via secure cellular connection from anywhere in the country.

Step 5 ~ Print: Receipts are produced; one for client signature and a second serves as receipt and ticket for the client. A swiped card and client signature should eliminate incidence of credit card charge backs.

Step 6 ~ Logout: Employee logs off at end of day and the shift record is closed. Shift and transaction summary reports may be printed including transactions by payment type. Shift data may be uploaded to the office in real time, or batched out upon return.

Whether hand-held by your agent curbside or mounted in a vehicle, **HWeb Mobile Ticketing** allows you to increase sales and productivity as well as client service levels. **Call today for more information.**
