

iPhone Reservations with HWeb iQuick

If you have a Hudson web reservation site, you can now have your clients make web reservations with your company on their iPhone or iPod touch** devices. With the release of HWeb iQuick – travelers can launch a browser on their web-enabled Apple devices (including the soon to be released Apple iPad) and enter in a special address that will launch the HWeb iQuick application. If they then save the shortcut to their home screen, an icon will appear, which when touched, will launch the web reservation interface directly on their iPhone.

Following the abbreviated menu screens, clients will select their airport, pickup / dropoff location, date and time of travel. Available services will be displayed followed by a screen that collects preferred payment and contact details. Upon completion of the booking process, an email confirmation is delivered to the designated

address. Have an iPhone or iPod Touch? Want to give your clients access to HWeb iQuick? Use the following format / URL to access HWeb iQuick:

<https://<CUSTOMERURL>.hudsonltd.net/app/iquick>

(ex: <https://acmelimo.hudsonltd.net/app/iquick>)

*For more information on how to identify the URL you should be using.
<http://kb.hudsonltd.com/article.php?id=449>

If you do not have an iPhone but want to see how your site will look for your clients that do, you can enter the link for your company into your web browser (Apple's Safari works best) and then resize the browser window so that it approaches the dimensions of an iPhone / iPod touch.
